# Research Experiment on UI Usability - Facebook Marketplace

By: Borhan Rahmani

## Evaluation and Analysis Results

a) **Topic**:

Facebook Marketplace is a convenient option for many people if they want to purchase or sell second hand goods. Therefore, we want to improve the ease and reliability of the interface, so that users can interact with the interface without stress.

Based on our initial evaluation of the interface, we decided to redesign the Facebook Marketplace website to include the following features:

- Minimum requirement for listing descriptions
- Mandatory specified filters based on item categories
- Easily findable buyer / seller reviews

b) **Evaluation Goals**:

1. How does the interface facilitate the findability of items for users, and what specific features contribute to this?
2. What are the primary obstacles and difficulties that users encounter when interacting with the interface?

c) **Summary of evaluation**:

Throughout this study we focused on gathering user experience data through a combination of direct and think-aloud observation followed up with an in-person interview. Our study was run with 6 participants, one per group member, and they were selected at random to allow for statistical generalisation when analysing data. Participants were all UBC students, most of whom declared to be familiar with and use Facebook Marketplace and therefore were able to better understand the changes we made to the interface, although this was not a requirement.

During the study itself, we modelled our user tasks based on our task examples. Users were given two tasks, both following the general format of finding a specific item in a given price range, checking seller reviews to find a credible seller and ultimately notifying the seller of their interest. This entire process was timed and users were asked to comment on their thoughts while completing the task. By the end of our study, users would be forced to interact with each of our added features, including horizontal scrolling, quick view, and prominent seller reviews, giving us both qualitative (user thoughts) subjective data, and quantitative (time to complete tasks) subjective data on usability. Participants were then interviewed by a group member for additional insight into their thoughts of the interface and to allow them to address any concerns they might have, providing even more qualitative subjective data. This entire process took no longer than 20 minutes.

d) **Evaluation Rationale:**

Our evaluation goals are focused on the findability aspects of the interface as well as resolving struggles users might have. This is based on the findings of our original evaluation where we found users liked having options, such as many filters, but found them a little chaotic and overwhelming. Thus, we decided to include more options for users like increasing the types of specified filters and adding horizontal scroll interactions for browsing.

We will be recruiting UBC students as participants. The participants we will be recruiting are user representatives—they shop second-hand and or thrift online—as these will be potential users of Facebook marketplace and will thus have an understanding of the original interface.

Regarding our evaluation method, we will conduct a think-aloud observation followed by an interview. For the think-aloud observation, we will use a coding sheet to take note of the steps participants take to accomplish the tasks and make notes about any difficulties they faced or general emotions observed (as a way to further gauge the accessibility of the interface). During the interview, we will ask participants how they felt using the prototype interface to gain a better understanding of the previously observed think-aloud observation. Interviewing the participants after the observation will enable us to get direct insight into any struggles they faced accomplishing given tasks and allow us to receive feedback on the prototype, allowing for qualitative content analysis. Having two methods in our study facilitates achieving our evaluation goals in identifying if users encounter difficulties using the website and assessing the time it takes to find something.

## e) **Prototyping Rationale:**

Based on the limited time and resource constraints, we decided to go for a vertical prototype to explore specific features in detail and substituted the less relevant sections with non-functioning fillers. Our prototype prioritised four key functionalities: filters, reviews, a previously viewed section, and item details hover. These features were identified as crucial during our initial assessments to significantly enhance the marketplace experience.

1. **Filters**: We improved filter options and increased their visibility to streamline user searches by breaking items into smaller categories, saving time and effort.
2. **Reviews**: Integrating a robust review system provides users with reliable vendor information, reducing the risk of scams or dissatisfaction.
3. **Previously Viewed Section**: A "previously viewed" section aids in item comparison, facilitating informed decision-making.
4. **Item Details Hover ("Quick View")**: Quick details displayed when hovering over items enable users to quickly assess basic information, improving search and browsing efficiency.

To add realism to our prototype, we created a landing page with different categories, specialised pages for applied filters, and listings with simulated user reviews. The design follows a similar colour palette and layout to Facebook for familiarity, using images to enhance the prototype's realism and usability.

## f) **Summary of Data, Findings and Analysis:**

After conducting our think-aloud observation, we discovered that participants on average took 2 min and 36 sec to complete the first task and 1 min 36 sec for the second task, showing an average decrease in time of 60 sec for participants to complete assigned tasks, which consists of locating the listing item, forming an opinion on it and the seller, and then messaging the seller (Fig 1). From this we can determine that the learnability of the prototype is pretty easy for users. As well, we can assume that the visibility of functions is quite perceivable as mentioned by participant 5, "Feels very similar [to Marketplace] but more condensed information". Thus, our interface demonstrates high findability of its features due to the lack of difficulty participants had in finding specific features.

Figure 2 demonstrates the number of participants who completed subtasks; although we were not evaluating if they would use all the features available, it is still a useful measure to see the extent to which people use these features when searching. We discovered that the features used less often were price and colour filters, and that not all participants determined if the seller would respond before reaching out. However, basic sub-tasks such as selecting categories, checking item availability, and the chat feature, as well as the less common "seller review" were features used in all observations.

Although it was clear that the basic sub-tasks would be met, seeing all users utilise the seller reviews in completing their tasks meant that we had achieved our initial requirement of implementing easily findable seller reviews to resolve struggles and uncertainties users have with unreliable sellers. This was evidenced in the general observations done for participant 6 who was "happy with the ability to look at reviews and make a decision"and was "grateful for reviews".

Based on the post-observation interview questions (of which the response summary is shown in Fig 3), the participants rated the navigation an average of 7.83/10. We believe some of the points taken off can be attributed to the fact that not all the features shown were programmed to function (such as men's clothing category and price filter), as there were 8 instances noted down of non-programmed features causing users general difficulties with the prototype. Additionally, we gathered that two participants liked the layout of the main page and categories section whereas 1 person thought the categories were wasted space. In terms of the "previously viewed" feature, five participants liked it for a variety of reasons—to compare with other listings or to keep track of what they've looked at previously—while one participant thought it was useless because they are used to opening new tabs or saving items, preferring instead to have a "recommended listings" feature.

All participants found the quick view to be helpful; according to participant 4, "it helps… with inspecting the items with 'no commitment' to click on anything". Participant 1, although agreeing with the quick view's usefulness, stated that it is not something she would actively use as she is a visual person and searches "based on image", so it would not make too much of a difference to her if she just expanded the listing details. Additionally, she stated that her poor eyesight would benefit from a "hover pop up" more than a quick view. So, we can conclude that the quick view is beneficial, even if not essential to one's search.

In regards to the horizontal scrolling, mixed feedback was received. As seen in Fig 3, two participants liked the idea and could see how it would be useful for browsing and 1 participant was indifferent to the feature. Three participants did not like horizontal scrolling because they viewed it as a less efficient (and less natural) method of scrolling compared to a vertical scroll. But one participant (Participant 4) who did not like the horizontal scroll said she could see its potential as it would give users an idea of what items exist in the category. This might have been due to a misleading implementation of the feature because the vertical scroll would still exist in both the main browsing page and category pages, but was not programmed into the prototype for lack of time. Thus, it is worth researching this feature more in future with a more complete, higher functionality prototype.

The user ability to determine seller reliability based on the seller review feature was described to be easy by all participants due to the star rating system next to their name, the keywords (review sentiment), as well as detailed reviews from past transactions. Participant 4 said that it would be "helpful against scammers", and Participants 5 and 6 stated that the reviews are readily accessible, easing the decision making process. Therefore, we can determine that the implementation of this feature is successful in achieving our goal and is appreciated by participants.

## g) **Conclusions:**

This usability study on our redesigned Facebook Marketplace interface provides valuable insights into user experience and interface design improvements. Our focus is on creating a stress-free experience by improving the reliability and ease of interaction. The study employed a mixed-methods approach, including think-aloud observations, task completion timing, and post-observation interviews with UBC students familiar with Facebook Marketplace. We found that the implementation of new features such as minimum listing descriptions, mandatory filters based on item categories, and easily findable buyer/seller reviews showed significant potential in improving the overall usability of the platform.

Key findings indicate that the prototype interface facilitates better findability and navigation, evidenced by an average decrease in task completion time and a high average navigation score from participants. The introduction of robust filter options, detailed seller reviews, a “previously viewed” section, and quick view details significantly streamlined the browsing and decision-making processes. The data supported that a majority of user's preferred these features and thought it would be a good addition to the existing Facebook Marketplace interface.

However, some features like horizontal scrolling received mixed feedback, indicating a need for further investigation and possible refinement. While these features aimed at emulating the experience of browsing through a physical second-hand store, user preferences varied, highlighting the importance of accommodating diverse user habits in interface design.

Overall, the redesigned Facebook Marketplace interface demonstrated considerable strengths in enhancing findability, reliability, and user satisfaction. The findings from this study underline the importance of continuous user-centred design practices and iterative testing in developing user interfaces that meet and exceed user expectations. Future iterations of the interface could benefit from addressing the feedback on less favourably received features and exploring additional enhancements based on evolving user needs. Throughout this process, it was clear that some features were controversial and maybe with some slight tweaking, these features can be modified to be favoured by a majority of users instead. This study contributes valuable lessons in interface design and user experience.

## Recommendations and Critique

### h) **Design Recommendations:**

Our redesigned interface for Facebook Marketplace has shown significant improvements in user findability, navigation, and overall satisfaction, indicating that the design is more user-friendly and efficient. Positive aspects of the interface include the quick view feature, which has been positively received and appears to enhance the browsing experience. Additionally, the reviews and filters have proven highly effective in improving the findability and trustworthiness of listings, as shown by shorter task completion times and more efficient decision-making processes. The robust review system has also made it easier for users to judge the reliability of sellers. However, some features of the interface require further improvement. The horizontal scrolling feature received mixed reviews, with some users finding it intuitive and others not. Similarly, the previously viewed section also had varied reactions, suggesting a need for further improvement to boost its utility and user interaction.

Given the mixed reactions to the horizontal scrolling, we are considering introducing options that let users choose their preferred way to navigate. We are also thinking about making the previously viewed section more useful: users could mark items to compare later, or we might add a section for recommended items. We plan to ensure this section can be toggled on or off, and be minimised based on user preferences. Also, we aim to refine the quick view feature to improve clarity and readability for all users, regardless of their visual abilities. These changes are all about ensuring the interface is as user-friendly as possible.

### i) **Critique of process:**

When we first started on our idea, there were several aspects of Facebook Marketplace that we had thought would be points of contention for users, including whether we were going to position our design from the seller’s or buyer’s perspective and if the default messages preset on the Marketplace were troublesome for users. However, as we did our first observations and tests, we found that the features we had initially thought posed difficulty for the users were not aligned with our participants’

responses. This led us to revise our initial model based on the responses we had gathered to create the 2 lo-fi prototypes. These prototypes we had created were simple frame designs and sketches that simply showed the features we still wanted to incorporate in our redesign, as well as features we believed would help enhance user experience. While the 2 lo-fi designs sought to address 2 key evaluation goals, we found that combining the key features of each might provide the more optimal experience for users, which we had pandered to focus on the buyers' experience on Marketplace. Throughout the design process, we often referred back to the data we had gathered from participants' from different stages to create a user experience that most closely aligned with the users' mental models.

The Figma med-fi prototype included horizontal scrolling features that imitated the manner of browsing through racks in a physical second-hand store, and the added hover feature for quick view details of each item allowed for a more efficient way for buyers to find the items they are looking for. That being said, as we had each conducted individual evaluations, our methods of evaluation may vary from person to person, thus the results we gathered may not be consistent.

## Appendix A.1: Medium Fidelity Prototyping Video Reference

https://youtu.be/3gejoVH5qq4

## Appendix A.2: Figures and Tables

Figure 1. Time taken to complete tasks (s)

Figure 2. Number of participants who accomplished sub-tasks

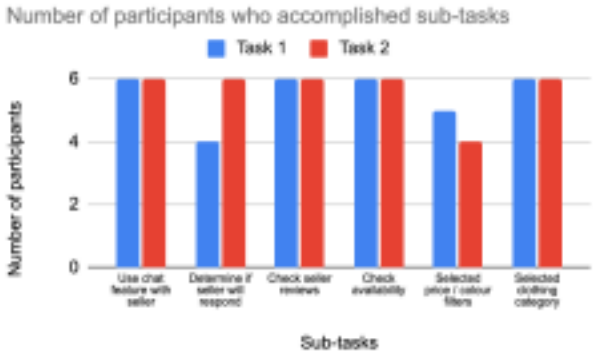

Figure 3. Colour-coded summary table of interview answers

| General thoughts | Navigation score | Navigation explained | Second hand feeling / Previously viewed feature Quick view | Horizontal scrolling | Seller reliability |
|---|---|---|---|---|---|
| normally phone browsing; helpful layout and helpful to see pricing / categories shown | 8 | looked at pictures first and prices on screen, would pick on browsing page if able | helpful if didn't have specific doesn't shop specs, also secondhand depending on much seller | helpful if just browsing, not for specific search | easy due to star rating, reviews, keywords |

| | | | | |
|---|---|---|---|---|
| | | | visual based, just look based on image, too no correlation, much text in a just reminiscent small space, of other hover would shopping sites be more (useful to have) helpful | |
| normally phone browsing; quick view was useful | 8 | looked at pictures first, checked price, then reviews | helpful, completed the tasks in likes less time could be secondhand but because helpful, worried about there is a interesting for sizes brief idea browsing | easy due to star ratings and review sentiment |
| not everything programmed was annoying but easy once you are familiar | 7 | chose category, then filter colour / price, then looked at reviews and ratings | previously viewed is helpful to keep track so you don't click into it twice values second helpful, gave hand because information less wasteful without not too and saves opening item, helpful but money saves time doesn't harm | easy, reviews that can be read, stars |

| | | | | |
|---|---|---|---|---|
| | | | feature is nice to compare not as efficient as vertical scrolling | |
| likes quick view and categories on the side | 8 | tried search, select categories to narrow down search | second hand feeling valued, ads take away from it loves it, helps to inspect without commitment doesn't like it, thinks it's a worse way of browsing | easy based on reviews, depends on sellers since many are new |
| categories section wastes space | | | previously viewed is useless, used to opening new tabs / saving items like the items displayed to give an idea of what's included | helpful against scammers |

| | | | | |
|---|---|---|---|---|
| | | | prefers a recommended tab subcategories would make horizontal scroll more helpful | |
| feels similar to current interface with more condensed info | 8 | clicked apparel and everything showed up | values secondhand helpful and good as a quick indicator for more details indifferent | easy, reviews are front and centre when clicked into posting |

| | | | | |
|---|---|---|---|---|
| | | | a good addition generally speaking | |
| nice features that the current interface doesn't offer like reviews | 8 | selected apparel, chose filters from drop down options | quick view vertical yes, makes scrolling is secondhand is browsing easier and good for budget more efficient more natural | reviews are easily accessible, helping decision making process |
| | | | previously viewed allows for comparing | |

## Appendix A.3.1: Observation Protocol

Observation Protocol

- One-on-one: one researcher will be present with the participant during the study
- Researcher will keep a comfortable distance from participant during the study ●
  A standardized stopwatch will be used during tasks

Script: Hi ____, thank you for coming in. I'm ____. This study is for an assignment for CPSC 344. Our study's focus is on the interface Facebook Marketplace, and our aim is to figure out how accessible and easy the website is to navigate for users. We will first conduct an observation in which you will be asked to complete tasks within a prototype of Facebook Marketplace. We will then follow up with a quick interview to discuss your experience.

| | |
|---|---|
| Observer: _____ | Participant: _____ |
| Date of Observation: _____ | |

**Section A: Objective**

- Observe participants using the prototype and make note of any struggles they face when doing assigned tasks.
- Remember to record the time it took for each task.

**Section B: Coding Sheet**

Script: I will first read you a description and based on it, please use this interface to fulfil the task requirements and think-aloud as you go through it.

**Task 1:** Summer is approaching and you don't have a lot of weather-appropriate clothing. You only want to spend around 30 dollars, so you want to find an affordable pair of shorts or skirt. You don't like to mix patterns when choosing outfits, so the shorts or skirt can't have a pattern.

1. Find a pair of shorts / skirt
2. Check price
3. Check colour
4. Message seller to purchase the clothing

| Subtasks | Y/N | Areas of Difficulty User Feelings | General Observations |
|---|---|---|---|
| Select clothing category<br><br>Select price / colour | | | |

| | | | |
|---|---|---|---|
| filters | | | |
| Check if the item is available | | | |
| Check seller reviews | | | |

Determine if seller will respond

Use chat feature with seller

Time to complete task:

---

Script: I will read you another description and based on it, please use the same interface to fulfil the second set of task requirements and think-aloud as you go through it.

**Task 2:** You're planning to attend your friend's birthday party this weekend and need to find a nice dress on short notice. You would like to find something bright and colourful so you can take nice pictures during the event. You need to ensure the item is still available, and that the seller will respond quickly so that you can purchase it from them within the next few days.

1. Find a nice dress
2. Check availability
3. Check seller's reliability
4. Message seller to purchase the clothing

| **Subtasks** | **Y/N** | **Areas of Difficulty User Feelings** | **General Observations** |
|---|---|---|---|

| | | | |
|---|---|---|---|
| Select | | | |

| | | | |
|---|---|---|---|
| clothing category | | | |
| Select price / colour filters | | | |
| Check if the item is available | | | |
| Check seller reviews | | | |
| Determine if seller will respond | | | |

Use chat feature with seller

Time to complete task:

## Appendix A.3.2: Interview Questions

1. How frequently do you use Facebook Marketplace?

2. What are your initial thoughts having done the activity prior?

3. How would you rate your experience in terms of navigation out of 10? 8

    a. Can you think of and explain the ways you narrowed down the search to find the item you want?

4. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the “previously viewed” feature affects it in any way?

5. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?

6. How did you find the addition of horizontal scrolling to view listings within categories?

7. How easy or difficult was it to determine if the seller was reliable? Please elaborate.

Ask about other things you observed in the think-aloud.

## Consent Form

## Human-Computer Interaction Course Projects

**Principal Investigator:** Dongwook Yoon, Assistant Professor, Department of Computer Science, University of British Columbia, yoon@cs.ubc.ca, 604-822-1993

**Co-principal Investigators:**

- Laura Cang, Department of Computer Science, University of British Columbia, cang@cs.ubc.ca, 604-822-9878

**Student Investigators:** Rahmani, Borhan, borhan200153@gmail.com

**Introduction:** Thank you for considering participating in this study. This work is affiliated with the UBC course "Introduction to Human Computer Interaction Methods" (CPSC 344). Please note that we are seeking people 19 years of age or older (or a UBC student who is 17 years or older) interested in second-hand shopping or thrifting and have an active social media account.

**Purpose:** The overall purpose of this research is to assess the user experience after adding new features within the Facebook Marketplace interface. Our focus is on improving the ease of use and general flow of the interface through increasing the number of specified categories and filters, as well as increasing user confidence in the interface through refining the seller reviews section.

**What you will be asked to do:** After you have read this document, I/we will respond to any questions or concerns that you may have. Once you have signed this consent form, you will be asked to:

- answer interview questions
- be observed while doing a routine activity (e.g., finding direction using online maps) -
interact with digital systems (e.g., a laptop)

No activities that involve in-person interaction will take place during the suspension of in-person activities due to COVID-19, with the exception of two cases: with the exception of three cases: (Case 1) naturalistic observation can take place with physical distancing, (Case 2) research done with people in the same household/bubble, e.g. family, so long as remains low-risk and non-coercive, and (Case 3) the research plan satisfies both Safe Research Guidelines and Safe Research Plan provided by UBC BREB.

This should take about 30 to 45 minutes and be completed in 1 session(s).

**How the data collected will be used:** Data collected (including any audio/video recordings) will be used for analysis and may also be used for class project presentations and other research presentations. Although only a course project in its current form, this project may, at a later date, be extended by one or more of the student investigators to be submitted as a research publication.

**Compensation:** There is no compensation for participating in this study.

**Confidentiality:** The results of your participation will be reported without any reference to you specifically. All information that you provide will be stored in Canada. It will be treated confidentially and your identity will not be revealed in reporting the study results. The two exceptions are: (1) excerpts from the video/audio recording in which a participant can be identified may be presented in a class project presentation (but any other presentation venue, such as a scholarly conference, will require that participants be non-identifiable in the video/images), and (2) we request but cannot enforce focus group members to keep discussions from any focus group confidential.

**Data retention:** Identifiable data and video/audio recordings will be stored securely in a locked metal cabinet or in a password protected computer account. All digital data will be encrypted. All data from individual participants will be coded so that their anonymity will be protected in any reports, research papers, and presentations that result from this work.

**Contact for information about the rights of research subjects:** If you have any concerns or complaints about your rights as a research participant and/or your experiences while participating in this study, contact the Research Participant Complaint Line in the UBC Office of Research Ethics at 604-822-8598 or if long distance e-mail RSIL@ors.ubc.ca or call toll free 1-877-822-8598.

I, __Charlene Chiu_____, have read the explanation about this study. I have been given the opportunity to discuss it and my questions have been answered to my satisfaction. I hereby consent to take part in this study. However, I realize that my participation is voluntary and that I am free to withdraw at any time.

## Consent Form

## Human-Computer Interaction Course Projects

**Principal Investigator:** Dongwook Yoon, Assistant Professor, Department of Computer Science, University of British Columbia, yoon@cs.ubc.ca, 604-822-1993

**Co-principal Investigators:**

- Laura Cang, Department of Computer Science, University of British Columbia, cang@cs.ubc.ca, 604-822-9878

**Student Investigators:** Rahmani, Borhan, borhan200153@gmail.com

**Introduction:** Thank you for considering participating in this study. This work is affiliated with the UBC course "Introduction to Human Computer Interaction Methods" (CPSC 344). Please note that we are seeking people 19 years of age or older (or a UBC student who is 17 years or older) interested in second-hand shopping or thrifting and have an active social media account.

**Purpose:** The overall purpose of this research is to assess the user experience after adding new features within the Facebook Marketplace interface. Our focus is on improving the ease of use and general flow of the interface through increasing the number of specified categories and filters, as well as increasing user confidence in the interface through refining the seller reviews section.

**What you will be asked to do:** After you have read this document, I/we will respond to any questions or concerns that you may have. Once you have signed this consent form, you will be asked to:

- answer interview questions
- be observed while doing a routine activity (e.g., finding direction using online maps) -
interact with digital systems (e.g., a laptop)

No activities that involve in-person interaction will take place during the suspension of in-person activities due to COVID-19, with the exception of two cases: with the exception of three cases: (Case 1) naturalistic observation can take place with physical distancing, (Case 2) research done with people in the same household/bubble, e.g. family, so long as remains low-risk and non-coercive, and (Case 3) the research plan satisfies both Safe Research Guidelines and Safe Research Plan provided by UBC BREB.

This should take about 30 to 45 minutes and be completed in 1 session(s).

**How the data collected will be used:** Data collected (including any audio/video recordings) will be used for

analysis and may also be used for class project presentations and other research presentations. Although only a course project in its current form, this project may, at a later date, be extended by one or more of the student investigators to be submitted as a research publication.

**Compensation:** There is no compensation for participating in this study.

**Confidentiality:** The results of your participation will be reported without any reference to you specifically. All information that you provide will be stored in Canada. It will be treated confidentially and your identity will not be revealed in reporting the study results. The two exceptions are: (1) excerpts from the video/audio recording in which a participant can be identified may be presented in a class project presentation (but any other presentation venue, such as a scholarly conference, will require that participants be non-identifiable in the video/images), and (2) we request but cannot enforce focus group members to keep discussions from any focus group confidential.

**Data retention:** Identifiable data and video/audio recordings will be stored securely in a locked metal cabinet or in a password protected computer account. All digital data will be encrypted. All data from individual participants will be coded so that their anonymity will be protected in any reports, research papers, and presentations that result from this work.

**Contact for information about the rights of research subjects:** If you have any concerns or complaints about your rights as a research participant and/or your experiences while participating in this study, contact the Research Participant Complaint Line in the UBC Office of Research Ethics at 604-822-8598 or if long distance e-mail RSIL@ors.ubc.ca or call toll free 1-877-822-8598.

I, _____, have read the explanation about this study. I have been given the opportunity to discuss it and my questions have been answered to my satisfaction. I hereby consent to take part in this study. However, I realize that my participation is voluntary and that I am free to withdraw at any time.

## Appendix B.3.1: Observation Protocol

Observation Protocol

- One-on-one: one researcher will be present with the participant during the study
- Researcher will keep a comfortable distance from participant during the study
- A standardized stopwatch will be used during tasks

Script: Hi ____, thank you for coming in. I'm ____. This study is for an assignment for CPSC 344. Our study's focus is on the interface Facebook Marketplace, and our aim is to figure out how accessible and easy the website is to navigate for users. We will first conduct an observation in which you will be asked to complete tasks within a prototype of Facebook Marketplace. We will then follow up with a quick interview to discuss your experience.

| | |
|---|---|
| Observer: Rahmani, Borhan | Participant: Charlene Chiu |
| Date of Observation: 8 April 2024 | |

**Section A: Objective**

- Observe participants using the prototype and make note of any struggles they face when doing assigned tasks.
- Remember to record the time it took for each task.

**Section B: Coding Sheet**

Script: I will first read you a description and based on it, please use this interface to fulfil the task requirements and think-aloud as you go through it.

**Task 1:** Summer is approaching and you don't have a lot of weather-appropriate clothing. You only want to spend around 30 dollars, so you want to find an affordable pair of shorts or skirt. You don't like to mix patterns when choosing outfits, so the shorts or skirt can't have a pattern.

1. Find a pair of shorts / skirt
2. Check price
3. Check colour
4. Message seller to purchase the clothing

| Subtasks | Y/N | Areas of Difficulty User Feelings | General Observations |
|---|---|---|---|

| | | | |
|---|---|---|---|
| Select clothing category<br><br>Select price / colour | Y<br><br>N | wanted to select women's clothing category first but wasn't programmed | |

Use chat

Time to complete task: 1:48

---

Script: I will read you another description and based on it, please use the same interface to fulfil the second set of task requirements and think-aloud as you go through it.

**Task 2:** You're planning to attend your friend's birthday party this weekend and need to find a nice dress on short notice. You would like to find something bright and colourful so you can take nice pictures during the event. You need to ensure the item is still available, and that the seller will respond quickly so that you can purchase it from them within the next few days.

1. Find a nice dress

2. Check availability
3. Check seller's reliability
4. Message seller to purchase the clothing

| Subtasks | Y/N | Areas of Difficulty User Feelings | General Observations |
|---|---|---|---|
| Select clothing category | Y | | use quick view more |
| Select price / colour filters | Y | | |
| Check if the item is available | Y | | |
| Check seller reviews | Y | | new seller no confidence, bad reviews found |
| Determine if seller will respond | Y | | |
| Use chat feature with seller | Y | | |

Time to complete task: 1:18

**Appendix B.3.2: Observation Protocol**

Determine if seller will respond and
make a decision

Use chat
feature with seller Y
y Happy with the ability to look at reviews

Time to complete task: 2:26

---

Script: I will read you another description and based on it, please use the same interface to fulfil the second set of task requirements and think-aloud as you go through it.

**Task 2:** You're planning to attend your friend's birthday party this weekend and need to find a nice dress on short notice. You would like to find something bright and colourful so you can take nice pictures during the event. You need to ensure the item is still available, and that the seller will respond quickly so that you can purchase it from them within the next few days.

21. Find a nice dress
22. Check availability
23. Check seller's reliability
24. Message seller to purchase the clothing

**Appendix B.3.7: Interview Questions**

1. How frequently do you use Facebook Marketplace?
   Once every few months, when looking for something specific

2. What are your initial thoughts having done the activity prior?
   Not familiar with desktop version, it's helpful to have the menu on the left and previewing on the right, helpful to see pricing and categories

3. How would you rate your experience in terms of navigation out of 10? 8

   a. Can you think of and explain the ways you narrowed down the search to find the item you want?
      Looked at pictures first, saw the prices on the feed, would pick option on browsing page if programmed

4. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the "previously viewed" feature affects it in any way?
   Previously viewed is reminiscent of other shopping websites - helps keep in mind what she's looked at and her options (likes the feature); never thrifted for clothes online but the feature just reminds her of other shopping websites (association doesn't take away from feeling)

5. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?
   Helpful, specs were specific and didn't require quick view info. Depending on seller, they might shove in keywords that could be helpful, or sizing and keywords (diff info), visual person, just look based on image and listing details will have more information anyway; too much text in a small space (hover pop up will be more helpful)

6. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way? If just browsing, it would help, but if have something in mind it isn't very necessary (likes the option)

7. How easy or difficult was it to determine if the seller was reliable? Please elaborate.
   Star rating, reviews, keywords in bubbles (relevancy) made it easy

Ask about other things you observed in the think-aloud.

**Appendix B.3.8: Interview Questions**

8. How frequently do you use Facebook Marketplace?
Once every few weeks to look for cheaper alternatives for items I want

9. What are your initial thoughts having done the activity prior?
I usually use Facebook marketplace on my phone, but the added quick view feature helped me save time so that I don't have to click into every listing

10. How would you rate your experience in terms of navigation out of 10? 8/10
    a. Can you think of and explain the ways you narrowed down the search to find the item you want?
    I heard the prompts so I looked at the pictures to see which ones fit, then I checked the price and lastly the reviews to make sure it matched all the criteria

11. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the "previously viewed" feature affects it in any way?
    I like the second hand market but I'm always worried about the clothing not fitting so I rarely get the apparel. The previously viewed helps keep track of what I viewed already so I don't double click, don't have any particularly strong feelings about it.

12. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?
    Helpful, allowed me to complete the tasks in less time because I already have a brief idea of what the listings are about.

13. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way?
    Could be helpful, interesting for browsing

14. How easy or difficult was it to determine if the seller was reliable? Please elaborate.
    It was fairly easy given that there were star ratings next to the seller names and review sentiment could be clearly seen

Ask about other things you observed in the think-aloud.

**Appendix B.3.9: Interview Questions**

15. How frequently do you use Facebook Marketplace?
    Not much only when looking for something specific

16. What are your initial thoughts having done the activity prior?
    It was easy to get the hang of it, but it was a little annoying since not everything was functional, It was easy once you find your way around

17. How would you rate your experience in terms of navigation out of 10? I'd say about 7/10, it was straightforward

    a. Can you think of and explain the ways you narrowed down the search to find the item you want?
       I chose a category, then I chose colour/price. Next, I looked at reviews and rating

18. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the "previously viewed" feature affects it in any way?
    I value it, it saves money and there is less wastage of things. The previously viewed tab is nice because we can always compare to what we saw before

19. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?
    It was very helpful, it gave a lot of information without actually opening the item, so saving time

20. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way?
    It's okay, not too helpful but also doesn't harm in any way. I don't think it would affect efficiency as compared to vertical scrolling.

21. How easy or difficult was it to determine if the seller was reliable? Please elaborate.
    Fairly easy, because there were reviews that we could read, also suggested feedback and stars.

Ask about other things you observed in the think-aloud.

**Appendix B.3.10: Interview Questions**

22. How frequently do you use Facebook Marketplace?
    Rarely, only when very bored or looking for something

23. What are your initial thoughts having done the activity prior?
    Likes the hover details and categories on the side. However, they thing the categories sections wastes too much space

24. How would you rate your experience in terms of navigation out of 10? 8

    a. Can you think of and explain the ways you narrowed down the search to find the item you want?
       Tried search, but wasn't able to. Proceeded to select categories to narrow down search

25. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the "previously viewed" feature affects it in any way?
    Does enjoy the secondhand market feeling, and thinks that ads with very professional listings detract from it. Also, think that the previously viewed section is useless, they are already used to opening new tabs or simply saving items for later, and would much rather have a "recommended" tab with suggestions based on the last items they clicked on

26. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?
    Really loves it. It helps a lot with inspecting the items with "no commitment" to click on anything

27. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way? Doesn't really like the horizontal scroll, seems like just a worse way of browsing through a category they are interested in. However, they do like having items from that category displayed to give an idea of what's included. It would be even better if instead of just having listings being displayed, it displayed subcategories instead (eg. on the electronics section show options like "computer", "camera", etc.), it would also make the horizontal scroll feel useful.

28. How easy or difficult was it to determine if the seller was reliable? Please elaborate.
    Very easy due to reviews, but it depends on the seller since many of the sellers are first or second-timers. Helpful against scammers

Ask about other things you observed in the think-aloud.

**Appendix B.3.11: Interview Questions**

29. How frequently do you use Facebook Marketplace?
    Every other day

30. What are your initial thoughts having done the activity prior?
    Feels very similar but more condensed information

31. How would you rate your experience in terms of navigation out of 10? 8/10 seems very simple and straightforward

    a. Can you think of and explain the ways you narrowed down the search to find the item you want?
       Clicked apparel and everything else showed up there

32. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the “previously viewed” feature affects it in any way?
    Does value the second hand market, for this task, previously viewed was not used, but in general it would be a good addition

33. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?
    It was very helpful and good to get a quick indicator about more details

34. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way? Not bad, not good

35. How easy or difficult was it to determine if the seller was reliable? Please elaborate.
    Pretty easy, because reviews are front and center when you click into the posting

Ask about other things you observed in the think-aloud.

**Appendix B.3.12: Interview Questions**

36. How frequently do you use Facebook Marketplace?
    Minimum once a week

37. What are your initial thoughts having done the activity prior?
    Nice features real FB doesnt offer, like the reviews right there
38. How would you rate your experience in terms of navigation out of 10? 8

    a. Can you think of and explain the ways you narrowed down the search to find the item you want?
    Selected apparel, then chose from options in drop down menus for category, price and colour

39. Do you value the "second hand market" feeling of Facebook Marketplace? And do you feel like the “previously viewed” feature affects it in any way?

    Yes, as a student on a budget I am okay with second hand. The previously viewed function allows me to quickly compare objects.

40. How did you find the quick view? Did you find that it made your search more efficient or was it more of a hindrance?

    I really like quickview, it makes the time it takes for me to browse more efficient

41. How did you find the addition of horizontal scrolling to view listings within categories? Did you find that it made your search more efficient or quicker in any way?

    No, I prefer vertical scrolling, its easier and more natural on a mouse.

42. How easy or difficult was it to determine if the seller was reliable? Please

    elaborate. Reviews being easily accessible helped with the decision making

    process.

Ask about other things you observed in the think-aloud.
